Radio Head Stereo Headphones are designed to cut the outside world out, giving you the freedom of a silent world in the outside world. With over-the-ear fitting, a wide range of colours and power levels, and with a 2.5-metre cable that you can choose to attach to your computer or belt, Radio Head are the ultimate headphones for when you need to keep it real. Radio Head High Definition Headphones Professional high quality headphones Colours: Black Power levels: 10mW - 20mW Over-the-ear design Designed for use with Powerlab and computer Cable length: 2.5m Extension cables available 2, 3-point earpads Low-noise and high definition audio in one Radio Head Stereo Headphones are compatible with most all devices that output a digital stereo output signal. Easily fits over your ears with over the ear fitting. If you have chosen to fit your headphones with the included cable, you can attach it to your computer or other device with a 3.5mm to micro-USB cable. Most popular sound cards & USB DACs are compatible with these headphones, and with the USB dongle you can connect your headphones to any system without dongle or other audio software. The Clarity Flip Stereo Headphones come with the 3.5mm Earphone Jack for connection of cables and also has an in line control switch for switching the mode between on and off. The Clarity 3.5mm Stereo Headphones come with a 2.5m Cord, Mic (of selectable inputs), On/Off switch, a Micro USB power input, and a Micro USB output port. Clarity Headphones are designed to connect with the USB port on the computer and then connect to any device that is capable of playing audio, such as a MP3 Player or CD Drive. The Clarity Foldable USB Headphones come with an in line control switch for switching the mode between on and off. The foldable USB headphones come with a Micro USB port for charging the headphones and a

6-th Order Butterworth Low-pass X64

6-th order Butterworth low-pass filters convert a signal into a desired response and output. Its cutoff frequency can be changed manually and the output can be connected to output with no and/or with varying filter response. The requested response is obtained by convolution of a required filter and an input signal. An approximation is based on a 3x3rational transfer function. The filter is an even function of frequency. 6-th Order Butterworth Low-pass Download PC/Windows

6-th order Butterworth is available in two variants: high-pass or low-pass. This type of filter has a few similarities with the cutoff filter, but the cutoff here operates at the decibel level. The idea of filtering is identical to the cutoff filter, which is to remove harmonic distortion. Where the cutoff filter is transparent for frequencies above the cutoff frequency, the Butterworth low-pass removes part of the frequencies. Features: To cut off harmonics you need to set a cutoff frequency and the filter will remove the frequencies above the cutoff frequency from the track. Compatible with several audio profiles including: 96kHz, 44.1kHz, 48kHz, 32kHz, 24kHz, 16kHz Adjustment range: 10Hz – 25kHz (0.1dB) Add channels Of course you can add channels manually Filter phase and cutoff This filter has a phase adjustment that controls the amount of the phase shift of the filtered signal. There is a cutoff knob for an easy selection of the filter's properties. The lower the frequency the stronger the cutoff, and vice versa. Inputs The filter can be used with microphone or line inputs Filter mode The filter is in two modes: • High pass/Low pass – only works with non-polar inputs • High pass/Low pass with polarity – works with non-polar inputs Other settings You can activate full bypass or auto cutoff mode, change the curve, audible range and more... Advanced Audio Processor is a tool to process audio files. It supports many different file formats, and it also lets you create your own custom profiles. For example, you can set the input and output file formats, the number of channels, the sample rate, and many more. You can also set the profile to save it to an XML file, so that you can load the settings easily whenever you need to use it. FEATURES: Audio Processing Audio library A list of the audio files currently processed is displayed Volume adjustment Variable sample rate (from 16 kHz to 192 kHz) Variable channels Variable bit rate (from 8 kbps to 192 kbps) Variable bit depth Variable file format Variable number of audio input channels Variable output file format Variable bit depth Switch between input and output channels Independent volume settings for input and output Advanced Audio Processor Description

What's New in the?

BeatFreak is an audio mixer based on the behavior of human ear perception. It handles two 16-channels of audio. It offers eight built-in effects, both software- and hardware-controlled. Each effect can also be selected from a graphic user interface. BeatFreak Description: A drum machine / beat box that can record, loop, quantize, sequence, and change tempo/pitch. DrumHero measures beats using a grid like interface, which we think looks great. The beats can be quantized, grouped for making drum loops, and even resampled using note length instead of frets. It's made for the drummer who wants to pick up a midi drum pad. You can add loops to make drum jams. A beat triggered by the drum pads plays a specific riff. It can trigger up to four different riffs. Each riff can be quantized. You can quantize the loop by stretching or compressing the notes. Features: Beautiful interface; 5 steps for adding loops Create drum jams with riffs, quantized beats, and loops Sound of the drum pads can play a custom riff Small and light Optional pads Drum Hero can be used with the MIDI instrument "Big Drum" for a large drum pad. It also has an optional beatbox mode, where you hold down the down pad and the beat box will quantize and play a note for each tap. Drum Hero Description: A midi sequencer with sync and effects like delay, pitch effects, and quantize. Has a visual timeline like polychord and an effect visualization. Has the ability to save and load projects as well as open projects directly. Ava_MIDI Description: Free, open-source audio utility program for Windows that includes a very powerful audio editor, CPU utilization and volume monitor, and audio recorder. It also includes a FFT analyzer, pitch detector, and sequencer with effects. Ava_MIDI Description: Reveal your mic on-screen with this simple, yet super cool app. The sound visualization comes in handy when using screen capture. MundiViewer Description: Create virtual organ pipes with the built-in Oscillator. Check the VU meter for the overall sound quality (the lowest point being no sound). Tweak the filters with the Stereo and Mono modes.

System Requirements For 6-th Order Butterworth Low-pass:

Minimum: OS: Windows 7/8/10 Processor: 2.4 GHz Dual-Core CPU or better Memory: 4 GB RAM Graphics: Nvidia GTX 650/AMD HD 7850 or better DirectX: Version 9.0 or higher Storage: 16 GB available space Additional Notes: Up-to-date video drivers. Recommended: OS: Windows 10 Processor: Intel Core i5-3570 / AMD FX-8350 or better Memory: 8 GB
